## 4 Installation confirmation

## Please read the following three statements and tick the boxes below, if they are correct.

Statement 1	Statement 2	Statement 3
The Section 104 Agreement has been signed and ratified by all parties.	The pumping station is fully operational, has been commissioned and certified by your M&E contractor.	The development has more than 25% occupation connected to the pumping station.

Telemetry fees have been paid at the additional fees stage of the agreement, please refer to our Developer Services charging arrangements for confirmation of fees at

wessexwater.co.uk/services/building-and-developing/charges-and-performance.

Standard installation includes configuration of Wessex Water telemetry system, including the provision of an ML4G cellular router, kiosk antenna and associated wiring, as well as testing all signals from source, making the site live to our control room, and issue all relevant certification. Installation is normally completed within 2 months of receipt of a correctly completed application, however Developer Services will contact you to advise you of any delays, such as needing to undertake an additional on site mobile signal strength survey.

By signing this application form you confirm agreement to installation and site monitoring by Wessex Water, you are also agreeing to maintain a private service maintenance contract with a M&E contractor, including a call out facility, until the pumping station is adopted. You must contact Wessex Water and advise any changes to call out contact details. If Wessex Water attend site due to incorrect call out details, all costs incurred by Wessex Water will be recharged to the applicant.
